ABOUT ME

I am a 2nd-year Computer Engineering student at Trakya University with a strong foundation in low-level programming and system architecture. **As a European Citizen (Bulgarian and Romanian citizenships) and Turkish national**, I possess full work authorization across the EU and Turkey. My technical expertise focuses on C, HTML and 8086 Assembly, where I have developed practical projects including a custom disassembler. Beyond core engineering, I am actively advancing my skills in cybersecurity, specifically in penetration testing through the eJPT curriculum and Kali Linux environments.

I am a proactive developer who maintains an active GitHub portfolio, showcasing projects ranging from C++ system utilities to security frameworks built with Python and Flask. Having achieved a B2 level of English proficiency, I am highly motivated to contribute to a dynamic engineering team in Amsterdam. I am eager to apply my analytical problem-solving skills and technical background in a professional internship setting.

EDUCATION AND TRAINING

01/09/2024 – CURRENT Edirne, Türkiye

Bachelor of Science in Computer Engineering Trakya University

Website https://www-en.trakya.edu.tr/ | **Level in EQF** EQF level 6

CERTIFICATIONS

HackerRank, 01/02/2026

Frontend Developer (React) Certificate

This certificate demonstrates proficiency in React, JavaScript, CSS, and HTML. It was earned by completing a rigorous assessment on HackerRank, which included building a NotesStore class and mastering logic-driven data manipulation.

Mode of learning: Online

Link https://www.hackerrank.com/certificates/4889d86ef0d9

BTK Academy (BTK Akademi), 01/02/2026

B2 Level English Certificate of Participation

This certificate verifies completion of the Upper-Intermediate (B2) English language program provided by BTK Academy. It covers advanced grammar, professional communication, and technical terminology essential for engineering environments.

Mode of learning: Online

Link https://www.btkakademi.gov.tr/portal/certificate/validate?certificateId=7rptPdeArP

HackerRank, 01/02/2026

Software Engineer Certificate

This comprehensive certification verifies core software engineering competencies, including advanced Problem Solving, SQL database management, and the design and implementation of REST APIs.

Mode of learning: Online

Link https://www.hackerrank.com/certificates/31d522b942bf

LANGUAGE SKILLS

MOTHER TONGUE(S): Turkish

Other language(s):

English

Listening B2
Spoken production B2
Reading B2
Spoken interaction B2
Writing B2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

C, 8086 Assembly,C#, C++, Python, JavaScript (React), HTML, CSS, SQL, VHDL | Cybersecurity: Penetration Testing, Network Security, Kali Linux | Engineering: Digital Logic Design, Electrical Circuit Analysis, Linear Algebra

PROJECTS

01/02/2026 – CURRENT

Advanced SYN Scanner

Developed a high-performance network scanning tool using Python and the Scapy library. The project implements stealth SYN scanning techniques to identify open ports and analyze network services while minimizing detection. It features multi-threaded scanning for efficiency and detailed reporting of network responses, demonstrating a deep understanding of TCP/IP protocols and cybersecurity fundamentals.

Skills:

- **C Programming**
- **Linux System Administration**
- **TCP/IP Protocol Suite**
- **Raw Sockets**
- **Bash Scripting**
- **Network Security & Pentesting**

Link https://github.com/mecik-arda/Advanced-SYN-Scanner

01/02/2026 – CURRENT

Interactive Terminal Portfolio

Designed and developed a minimalist, browser-based command-line interface (CLI) to showcase system-level programming expertise. Built with pure HTML, CSS, and Vanilla JavaScript to ensure high performance and a zero-dependency architecture. The project features a custom-built command parser and a retro-styled CRT aesthetic, reflecting a "no-bloat" engineering philosophy. It provides an interactive environment for users to explore my technical skills and professional background.

Link https://github.com/mecik-arda/CLI-Portfolio

15/02/2026 – CURRENT

Yggdrasil Security Framework

Developed a modular security management framework designed to centralize and automate vulnerability assessment workflows.

Skills:

- **Technologies Used:** Built with Python and Flask for the backend, utilizing Bash scripting for core security automation and integration.
- **Scope:** The project encompasses network security monitoring, automated port scanning, and a modular plugin system for custom security scripts. It focuses on providing a unified dashboard for security professionals to manage penetration testing tools and analyze system vulnerabilities efficiently.

Link https://github.com/mecik-arda/Yggdrasil-Security-Framework

14/02/2026 – CURRENT

Kali Ghost Scripts

Developed a specialized collection of automation scripts designed for Kali Linux to streamline reconnaissance and post-exploitation phases during penetration testing.

- **Technical Execution:** Engineered using advanced Bash scripting and Python, integrating industry-standard security tools such as Nmap and Metasploit to perform rapid, automated system analysis.
- **Scope:** The project focuses on "ghost" operations—minimizing digital footprints while executing complex security audits. It includes modules for automated network mapping, vulnerability identification, and custom payload delivery, demonstrating a practical mastery of offensive security methodologies and Linux system internals.
